Save Yourself a Headache!

Supra
A UTC Fire & Security Company

Have you experienced jamming problems with your KeyBox container? It could be because you're trying to squeeze-in too much. KeyBox containers are made for keys and gate access cards only!

For proper use of the KeyBox container, place keys on a key ring only - no keychains, lanyards, tags, clips, etc.

Here are a few common mistakes make that cause KeyBoxes to jam:

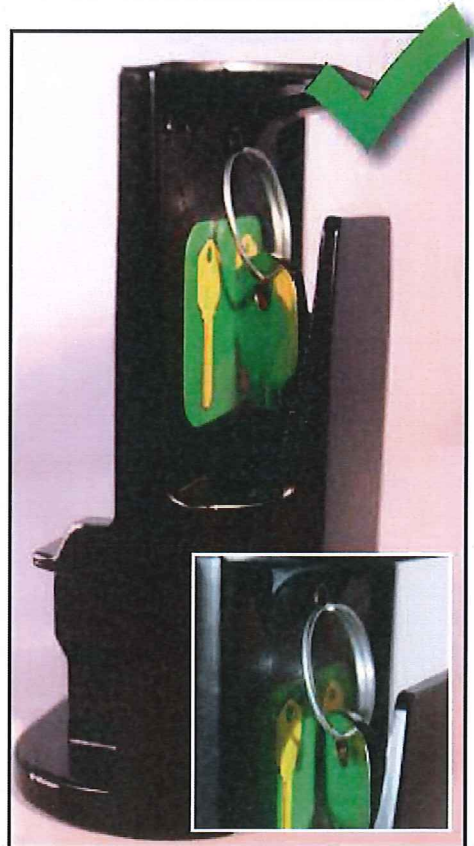

Do not stuff papers in the container.

Save yourself a "headache!"

Do not place clips and/or key labels in the container.

Do not place more keys than are neccessary in the container.

Do not put keychains in the container. Yes, even if they say "REALTOR®" on them.

If you experience a jammed KeyBox, stop in the OABR office for assistance.
